

# Auditor Core

Automating day-to-day network and security operations

## Auditor Core

Rebasoft Auditor Core is a next-generation software application designed to give organizations unrivalled visibility into all devices and users connecting to the network.

The one, accurate, up-to-date source of what is happening on your network is the network itself. Using standard mechanisms Auditor Core can, in real-time, interrogate the network and catalog every device connected over time.

Auditor Core takes the captured data and correlates the end-device, the allocated network address and, if enabled, the user that has authenticated to the domain. This provides both a real-time view as well as an historic record of all network access.

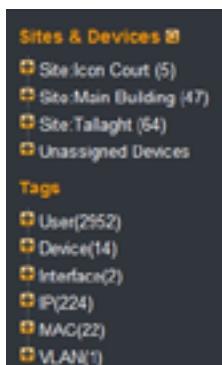

This basic set of information can be used for a variety of purposes within an organization—such as security, problem management, change control and more.

Auditor Core goes beyond many other systems, in allowing real world information to be reported along with the network; a user will be a real person in a real department in a physical location not just an abstract userID. These relationships can be seen at-a-glance.

Auditor Core is open, you do not necessarily need to throw away existing systems; integration and coexistence are part of Core's DNA.

Navigate using real-world information

## Why do I need Auditor Core?

Put simply, knowing where and when users connect to the network over time allows an organization to meet a variety of needs:

- User administration
- change management
- Troubleshooting
- rogue devices
- Capacity planning
- Zero Day threats
- Access violation
- Mean Time To Resolution
- skills
- Security**
- Change control
- PCI
- multivendor
- Cloud
- Compliance
- Cost Reduction
- Toolset consolidation
- User satisfaction
- Acceptable use**
- Return on Assets
- Virtualization
- Datacenter consolidation
- Cease and desist**

## What can Core provide?

Delivering single environment that can serve multiple teams, Auditor Core provides a foundation that:

### Improves security:

- Real-time Security Asset Management
- Rogue device detection
- Compliance with acceptable use policies
- Combat Malware by identifying potential zero-day threats
- User access anomaly detection
- Hacking / Denial of Service

### Speeds problem resolution:

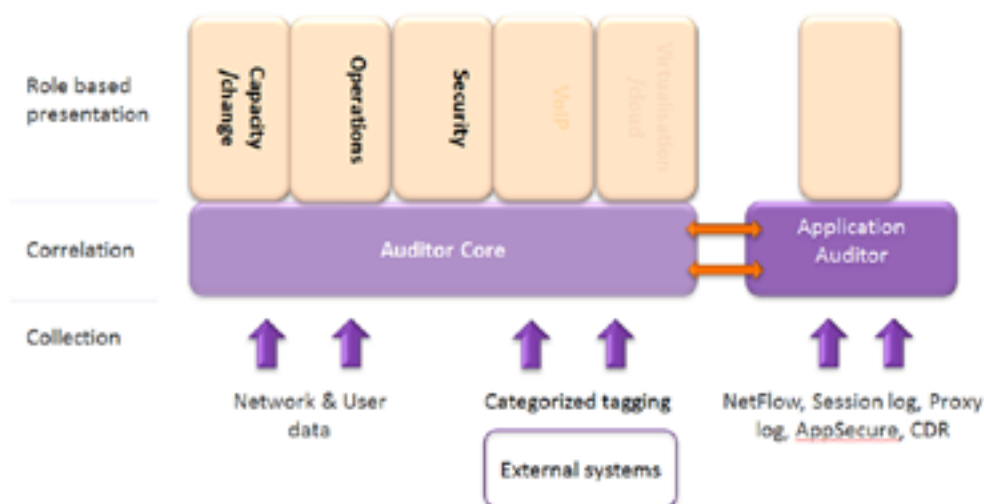

- Improve network availability (Reduce Mean Time To Fix)
- End-to-end visibility - improved user satisfaction
- Integration / coexistence with current systems

### Supports capacity/change process:

- Drive up return on assets
- Real-time user based resource planning
- Quality control for adds, moves and changes
- Virtualization
- Datacenter consolidation

## Technology features

- Find users by name, IP, device, location and more
- Detailed forensic audit trails
- Watchlist to track roaming devices
- Whitelist alerts for unknown devices accessing your network
- Categorized "Tagging" with external data from HR, Asset management systems and more
- Capacity planning reports
- Build and track change plans
- Easy to navigate web interface
- Extensive integration and full URL controls
- Fast deployment, probe less

Auditor Architecture

# Is it for my organization?

Auditor Core is suited to any type of organization.

Auditor Core will be of major benefit to any organization that has:

- More than 500 network users
- Users across multiple locations
- A multivendor environment
- Under pressure operationally
- Security / audit concerns

## Benefits

### Better visibility equals operational efficiencies

Auditor Core helps with operational efficiency by showing all the network and relating it to users—this saves time and effort in managing operational tasks

### Reduced downtime

Auditor Core capabilities mean that information can be found faster, leading to improved MTTR (mean-time-to-repair)

### Improved network security

Security on a network must start with an understanding of what needs to be secured. Auditor Core provides the foundation for security asset management by showing all users and devices connected to your network

### Manage network capacity without increasing spend

Auditor Core capacity planning lets you manage adds, moves and changes more effectively—enabling much better use of your existing infrastructure investment

### Meet compliance regulations

Auditor Core helps ease the pressure on organizations in complying with both governmental and governance requirements to record network access. With almost limitless recording of network and device access, a full forensic chain of user, IP and device access can be kept and reported on. This assists with SOX, FSA and PCI compliance

### Protect investment

Auditor Core's powerful integration facilities mean you can inter work with existing systems—you do not need to displace existing systems to deploy

### Fast deployment

Software only (no probes/agents to install or configure) Auditor Core can be installed and commissioned in minutes

### Low resource requirements

Auditor Core has been designed so that it is efficient, you do not need a large server farm to run the application

## Next steps?

## Minimum System Requirements

System requirements vary depending on the number of devices to be polled. The following requirements are a guideline; the best way to determine requirements is by testing the software's performance in a specific network environment. To this end Rebasoft has packaged a 7 day trial download:

- Dual core Intel Xeon or AMD similar processor
- 2GB RAM, although performance will benefit from increased RAM
- 160 GB SATA 7200rpm+ disk (or greater depending on network size and period of storage)
- Windows 2003/2008 server or Linux
- Internet Explorer V6 or later, Mozilla V3 or later (JavaScript must be enabled in the browser)
- 1280 x 1024 pixel screen resolution is recommended for client devices accessing Auditor. VMware supported

## About Rebasoft

Rebasoft is a privately held business founded to build solutions for:

- Improving efficiency of network and security operations
- Automating day-to-day functions
- Integrating with existing systems

This ultimately saves organizations time and money
