Rebasoft

CASE STUDY · EDUCATION

Two tools replaced by one, and costs down, for a UK boarding school.

A UK independent boarding school with around 800 pupils replaced separate network monitoring and device onboarding tools with Rebasoft, making onboarding simpler for students, improving compliance visibility and cutting costs.

~800	2 → 1	0	Lower
pupils	tools replaced by Rebasoft	agents needed for onboarding	licence, server and polling costs

THE CHALLENGE

- Separate monitoring and onboarding products overlapped, adding cost and complexity.
- Onboarding personal devices was so cumbersome that students used others' credentials to get around it.
- With several systems, there was no single view of security compliance, on a tight school budget.

OUR APPROACH

- Rebasoft replaced both the network monitoring and device onboarding products.
- Agentless onboarding, with no pre-authorisation of devices on the switches.
- A unified view of assets, users and network use to measure compliance with school policy.

WHAT THE SCHOOL GAINED

Simpler onboarding
Students get online easily, removing the reason to borrow credentials.

Compliance in one view
Assets and use measured against the school's security policy.

Licences saved
Two products' licences replaced by one.

Safeguarding upheld
Restrictions on harmful content and services applied as intended.

Misuse spotted
Signs of unauthorised access or stolen credentials monitored.

More savings found
Monitoring revealed obsolete and unused systems to retire.

"We reduced costs which helped the school with its financial aims… We were able to become more effective with fewer systems to operate and use." Network manager.

WHY IT MATTERS FOR SCHOOLS

Safeguarding
Everyone on the network through the right door.

Fewer tools
Monitoring and onboarding in one.

Budget-friendly
Lower licence and running costs.
