See your Cyber Essentials readiness all year round.

A live verdict and a pre-filled submission workbook end the annual scramble for evidence. Cyber Essentials is often the first proof customers and insurers ask for, and Rebasoft keeps your position current with every collection, with no endpoint agents to deploy.

~50%
of the questionnaire pre-filled from collected data

IASME v3.3
question set, with evidence sheets

6
areas checked, control by control

0
endpoint agents to install

YOUR POSITION, CONTROL BY CONTROL

Firewalls
Host firewall status read directly from each Windows and Linux machine, in place of screenshots.

Secure configuration
Agentless host checks across Windows, Linux and Intune, with expected and observed values side by side.

User access
Identity rules surface dormant administrators, MFA gaps and stale guests before your assessor asks.

Malware protection
Active protection recognised from Defender or a third-party product, with signature freshness through Intune.

Security updates
Vulnerabilities, end-of-life software and late Windows patches in the same verdict, so there is one status to manage.

TLS and certificates
Expired and expiring certificates, old protocols, weak ciphers and short keys caught before they cause a problem.

Green means checked
A control passes only when its evidence is complete and current. Otherwise Rebasoft reports Not assessed, with the reason, so gaps surface well before your assessor sees them. The dashboard, PDF and CSV all agree.

Patching 412 of 412 devices checked	Pass
Malware protection 3 devices with no protection	Fail
Secure configuration 38 devices unreachable: credential rejected	Not assessed

THE SUBMISSION WORKBOOK

Pre-filled, less to research
Questions on scope, patching, access and malware protection are populated from collected data, which saves your team the chase.

Answers you can stand behind
Each row links to a detail sheet, with a coverage badge showing how the answer was derived.

Guided, less to repeat next year
A wizard handles organisation, scope, policy and network boundary questions, and keeps the history for your next renewal.

Ready for Cyber Essentials Plus
You arrive with the same verdict, checks and evidence in hand. Your assessor carries out the testing.

A RENEWAL BECOMES A REVIEW, NOT A PROJECT

SIX WEEKS OUT
Review the site
The status of each control, with the reasons. Two need attention.

THAT DAY
Organisational answers
A wizard over the IASME questions shows how many remain.

THAT WEEK
Policy attached
A patch policy from a template, attached to its question for next year too.

NEXT WEEK
Fixes confirmed
The team remediates with its own tools; the next collection confirms it.

RENEWAL
Workbook reviewed
One row per question, with its answer, coverage badge and evidence.

Your team submits; certification stays with your certification body. Setup needs credentials for the hosts and directories in scope. MSPs can deliver Cyber Essentials as a repeatable service, with each customer in its own deployment and reports scheduled per site.
