Rebasoft

FOR MSPS AND MSSPS

Deliver repeatable assurance around your customers' critical services.

Start every customer with an IT health review, then give its board regular evidence drawn from its own estate. Rebasoft deploys next to the tools your customers already run, with nothing switched off and nothing to install on endpoints, and your customers' data never shares a database.

THREE PARTNER SERVICES FROM ONE PLATFORM

01 · Fixed-scope project

Start with an IT health review

The customer sees its estate, with rejected credentials, coverage gaps and out-of-date assets, and its first business service is set up.

02 · Monthly service line

Reduce the risk to critical services

The ranked work list becomes a recurring service. Engineers work a shorter list with their own tools, and Rebasoft confirms closure at the next collection.

03 · Recurring review

Show the board what changed

A branded report, scheduled per site, answers auditors, insurers, customers and the board with evidence drawn from the estate.

FOR MSSPS: LIFT SECURITY SERVICES FROM TECHNICAL REPORTS TO THE BOARD

Findings ranked by service

From collected inventory, not scans. False positives are filtered and the rest ranked by known exploitation and business service.

Evidence with the alert

Flow analysis raises scan, flood, lateral movement and brute-force findings and keeps the flows behind each one.

Coverage you can stand behind

Every report states what was covered, and anything unverified shows as Not assessed rather than as a pass.

A NEW CUSTOMER ONBOARDED AND REPORTING IN ITS FIRST MONTH

DAY 1

Deployment established

Import the appliances and apply the licence key. The customer's data is separate from day one.

DAY 2

First business service

Site rules place devices; you define with the customer the service it can least afford to lose.

DAY 3

IT health review

Agentless collection builds the inventory, and anything unreachable is reported as Not assessed.

MONTH END

First report issued

Scheduled with your branding and sent through the site's mail route, with no engineer time.

EACH CUSTOMER HAS ITS OWN DEPLOYMENT

Site-scoped roles

Engineers see the sites they look after and everything below, with the rest out of view.

Per-site MFA

Require MFA once on a subtree, and every site below inherits it.

Branded reports

Your name, logo, header and footer on every scheduled report.

Read-only API tokens

Assets, relationships and collection failures for your own systems.

Per-site SIEM and email

Each site uses its nearest target, so subsidiaries keep their own routes.

Licence continuity

If a licence lapses, reports pause; on renewal they resume with no rework.

Licensed by asset, with no per-user or per-site charge. Each further service line runs on the deployment you already operate, adding recurring revenue without adding a deployment.

Green means checked. Your reputation rides on each report you send. Rebasoft runs the collection itself, so it knows what it could not check and says so, and your customer is never handed false assurance under your name. Start with one customer to measure your delivery hours.
