

Secure everything

Policy compliance

Datasheet

65% of cyber attacks exploit simple misconfigurations

This is why recently, there has been an increased focus on device configuration in the security world. You can see this in security standards such as Cyber Essentials, NIST and ISO 27001. Senior management are now putting more pressure on IT teams to implement security policies to remediate misconfigurations.

But enforcing and managing security policies is a time-consuming, extensive process with plenty of room for error. Most businesses admit, they do not adequately follow their own internal security policies. With remote working now on the menu, IT teams are having to manage this transition on top of their day-to-day tasks. All the while, they face a lack of time, staff and tools to do their job.

“

“With Rebasoft I can now see all my network attached devices - in one system - and validate them for compliance purposes”

CISO, charity

These are the problems we hear:

- **New types of devices** with no way of getting all the information to resolve security compliance issues
- **Inadequate security tools** that are becoming too expensive and aren't fit for purpose
- **Inability to keep staff** means you're "always running to stand still"
- **Incoming project deadlines** mean you need faster and easier systems to manage security

Rebasoft can help

Built on top of our leading asset discovery and classification capabilities, you can be sure that you have a unified view of your systems. Not just end-user devices, but servers, network devices and IoT systems.

- **Real-time asset information** means up-to-date information
- **Out-of-the-box assessments** using cyber security standard measures to ensure compliance
- **See your compliance score** with an easy ability to drilldown and find non-compliant systems
- **Automated data exports** to your favourite log management or reporting system

This makes identifying misconfigurations, security control gaps and securing the network easy.

How we provide value

Rebasoft discovers, assesses and tracks security compliance all from one system.

- **A single deployment** collecting and consolidating information means you do not need humans to manually collate and report on data
- **Integration into asset management** means you do not need to spend hours tracking down systems that need security remediation
- **Lightweight**—collecting information effectively and automatically reduces the load on managed IT systems
- **Fewer systems and automation** helps reduce complexity and workload on busy IT teams
- **Automation** helps eliminate manual tasks and reduces human error

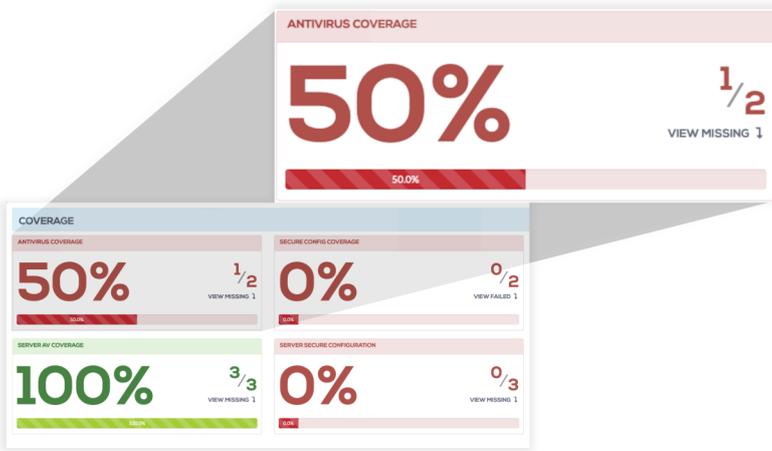

“

“We could reduce our security system needs by 60% with Rebasoft”

CISO, Retail

The Rebasoft policy compliance system

Secure everything

Secure configuration

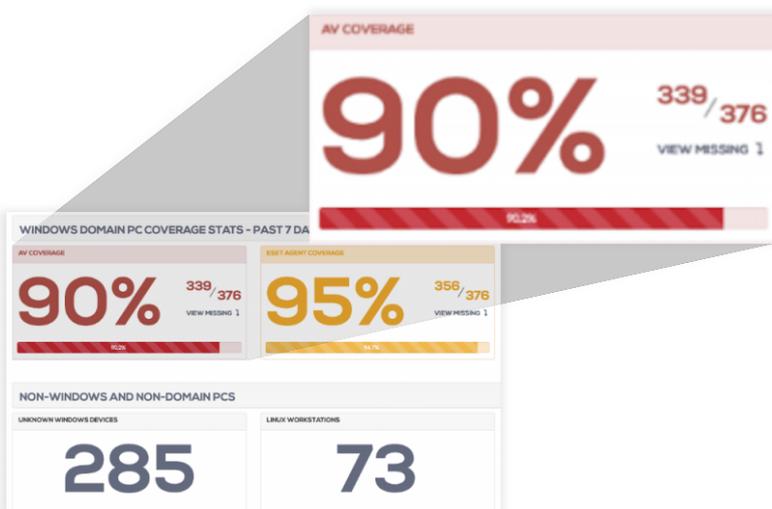

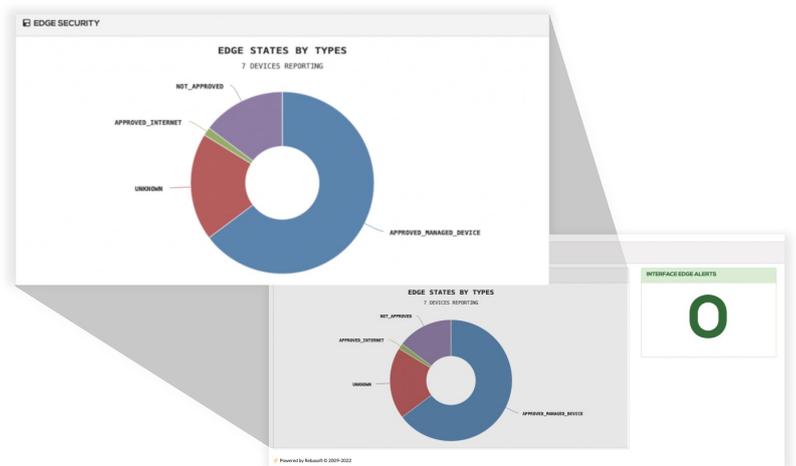

Flexible, at-a-glance status of key security measures. Answering critical security questions like:

- Is AutoPlay disabled?
- Are users allowed to install their own apps?
- Are personal firewalls and disk encryption enabled?
- Are Linux servers recommended SSH access settings enforced?

Network perimeter security

The key to building a secure environment is ensuring the network is secured:

- Are network device management interfaces locked down to encryption methods?
- Are default passwords changed?
- Are third party connections identified and approved?

Malware coverage

Rebasoft automatically analyses your malware coverage:

- Are all user PC's running up-to-date anti-virus?
- Which PC's are missing protection?
- Are servers running malware and file protection software?

But that's just the start

Using the asset discovery system as a base, Rebasoft provides the functionalities of multiple cyber security programs like:

- Asset management
- Secure configuration
- Vulnerability management

So with Rebasoft, you can cover the same ground with less solutions. So, you can save money and reduce complexity, because it's all seamlessly integrated.

So why not find out more by booking a live demo with an expert?

Try it now

There's nothing like seeing it in action. After all, you wouldn't buy a car without test driving it.

About us

We at Rebasoft are committed to delivering a robust cyber security solution that addresses genuine business needs. We are not interested in a "silver bullet" approach. We believe that multiple functionalities from one platform and real-time data are essential for keeping up with today's cyber threat landscape. We believe this approach is the future of cyber security and we aim to be the pioneers. We are proudly a UK based company. Visit us at www.rebasoft.net
