

Agentless asset inventory

Use case

Datasheet

Asset management software was never built for security

It was built for business operations and efficiency. You can see the legacy of this in the widespread use of active scans, an archaic way of managing devices for security.

Active scans only provide a "snapshot" of your network. What happens if a device isn't connected during the scan? You'll never know it's there. Over time a "drift" builds between your "snapshot" and what you actually have, leaving gaps in what you can see. You can install agents, but what happens when you can't?

Typically asset management programs are also isolated, putting a lot of work on your IT team who have to manually import and export data between programs. What should be simple day-to-day tasks become tedious, repetitive exercises spanning multiple programs. Your IT team is already short staffed and overstretched.

These are the problems we hear:

- **Wasting time** - struggling to collate data across disparate systems
- **Gaps in what you can see** due to lack of real-time visibility
- **Struggling to find unmanaged devices** since agents need to be installed
- **Insufficient data** to perform audits and day-to-day tasks
- **Poor coverage** because you can't afford expensive licences for all users

“

“With Rebasoft I can now see all my network attached devices - in one system - and validate them for compliance purposes”

CISO, charity

Rebasoft can help

Rebasoft uses the network to discover and collate endpoint information so you don't need scans or agents.

- You can find any unmanaged or IoT devices since it is agentless.
- It automatically classifies devices by type.
- Provides easy reporting for cyber security standards.
- Allows you to see remote workers through integration with MDM's like Intune.
- Allows you to set criticality to prioritise your important assets.
- Detailed information like hardware model, location, operating systems, installed applications and users.

What are the benefits?

- **Save time** with integrated discovery collecting data from multiple managers
- **Full visibility**—find unmanaged systems and IoT devices
- **No disruptions**—it's lightweight, so you can see what you want, when you want
- **Simple**—there's no need to install any other hardware or software
- **Feeds directly into other processes** like secure configuration and vulnerability management

How we provide value

Rebasoft discovers, assesses and tracks security compliance all from one platform.

- **A single deployment** collecting and consolidating information means you do not need humans to manually collate and report on data
- **Integration into asset management** means you do not need to spend hours tracking down systems that need security remediation
- **Lightweight**—collecting information effectively and automatically reduces the load on managed IT systems
- **Fewer systems and automation** helps reduce complexity and workload on busy IT teams
- **Automation** helps eliminate manual tasks and reduces human error

But that's just the start

Using the asset discovery system as a base, Rebasoft provides the functionalities of multiple cyber security programs like:

- Asset management
- Secure configuration
- Vulnerability management

So with Rebasoft, you can cover the same ground with less solutions. So, you can save money and reduce complexity, because it's all seamlessly integrated.

About us

We at Rebasoft are committed to delivering a robust cyber security solution that addresses genuine business needs. We are not interested in a "silver bullet" approach. We believe that multiple functionalities from one platform and real-time data are essential for keeping up with today's cyber threat landscape. We believe this approach is the future of cyber security and we aim to be the pioneers. We are proudly a UK based company. Visit us at www.rebasoft.net
