

Use case

Criticality &
prioritisation

Datasheet

You cannot ever be 100% secure

There is always risk, so security is a balance. It's a balance between security and usability, between risk and opportunity. It's for you to decide what is an acceptable level of risk and what security controls are appropriate. Really, security is all about managing risk.

Everyone has limited resources so it's important to focus on securing the things that you value the most, the things that are at the most risk and the things that would cause the most damage if compromised. For example you'll be fine if that printer fails but if a critical server goes, you're in trouble.

This process of assessing the likelihood and impact of risks and prioritising the allocation of resources is what's called a risk-based approach. It is essential for ensuring you are spending in the right places.

But most organisations struggle to implement a risk-based approach. They struggle with poor visibility of IT assets so they cannot accurately assess the risks they face. Most security solutions are isolated with poor integrations, making it difficult to get a holistic view of your security landscape.

“

“In order to exploit the benefits of using the internet, we have to accept a level of risk.”

These are the problems we hear:

- **Struggling to collate data** across isolated systems
- **Trouble identifying critical assets** due to poor visibility
- **Lack of automation** means wasted time
- **Lack of efficiency** in applying security controls

Rebasoft can help

Rebasoft provides complete visibility into your network, so you can accurately and easily take a risk-based approach, all from the Rebasoft Management Console:

- Automate criticality
- Identify high and critical vulnerabilities by device importance
- Identify and respond to security issues using business importance information

The screenshot displays two overlapping window panes from the Rebasoft Management Console. The top pane, titled 'MAC STATE', shows a table of 'Critical Service' data. The bottom pane, titled 'DRILLDOWN', shows a detailed view of a specific device entry.

TOPIC	INDIVIDUAL MACS	PERCENTAGE
File and Storage Services	3	100%
Web Services	1	33%
Hyper-V	2	66%
Network Policy and Access Services	2	66%
Active Directory Certificate Services	1	33%

ACTIVE	SERVER	DEVICE	MAC	MAC STATE	MAC TYPE	TAG	TOPIC
<input checked="" type="checkbox"/>	AC-mst1-1(A)	ms2000-pse(10.100.1.13)	0000-29#4e4e7700	Critical Service	Server_Active Directory PDC		Active Directory Certificate Services

What are the benefits

- **Save money**—allocate resources accordingly
- **Single pane of glass**—see all IT assets and set criticality, all from one system
- **Resolve critical vulnerabilities faster**—vulnerability management is fully integrated so you don't have to jump between a dozen programs
- **Save time**—all areas of the Rebasoft platform are natively integrated

How we provide value

Rebasoft discovers, assesses and tracks security compliance all from one platform.

- **A single deployment** collecting and consolidating information means you do not need humans to manually collate and report on data
- **Integration into asset management** means you do not need to spend hours tracking down systems that need security remediation
- **Lightweight**—collecting information effectively and automatically reduces the load on managed IT systems
- **Fewer systems and automation** helps reduce complexity and workload on busy IT teams
- **Automation** helps eliminate manual tasks and reduces human error

But that's just the start

Using the asset discovery system as a base, Rebasoft provides the functionalities of multiple cyber security programs like:

- **Asset management**
- **Secure configuration**
- **Vulnerability management**

So with Rebasoft, you can cover the same ground with less solutions. So, you can save money and reduce complexity, because it's all seamlessly integrated.

So why not find out more by booking a live demo with an expert?

Try it now

There's nothing like seeing it in action. After all, you wouldn't buy a car without test driving it.

About us

We at Rebasoft are committed to delivering a robust cyber security solution that addresses genuine business needs. We are not interested in a "silver bullet" approach. We believe that multiple functionalities from one platform and real-time data are essential for keeping up with today's cyber threat landscape. We believe this approach is the future of cyber security and we aim to be the pioneers. We are proudly a UK based company. Visit us at www.rebasoft.net
