Use case

Malware Coverage

Datasheet

# You'd be surprised how many systems we find without antivirus

Simple basic misconfigurations like this are actually very common, especially on larger, complex networks.

Organisations often struggle to see every device on their network. Asset management software that uses active scans only serves stale data, which can lead to missed devices. And too often, expensive software licences mean you can't afford coverage for every device. What software is available offers poor integrations, which can make managing configurations an arduous task, spanning a dozen programs with too much manual work.

Even if you can get the data to line up, it can be hard to see it in a clear, understandable way. It's important to have reports and graphs that allow you to measure your performance, so you can allocate workload and resources accordingly.

Otherwise you face poor compliance which can lead to vulnerable systems and your Cyber Essentials getting revoked.

#### These are the problems we hear:

- Poor coverage due to expensive licences
- Gaps in what you can see due to intermittent scans
- Poor reporting capabilities and a lack of actionable data
- Poor allocation of resources leading to delayed remediation

#### 66

"96% of organisations have misconfigurations in their systems"

#### Rebasoft can help

Rebasoft automatically detects configurations like antivirus coverage:

- Are all user PC's running up -to-date anti-virus?
- Which PC's are missing protection?
- Are servers running malware and file protection software?
- Create custom graphs and reports to track your progress

## What are the benefits

- Increase malware coverage with full visibility of all It assets
- Never miss a device—Rebasoft is always monitoring in real-time
- Allocate resources accordingly using custom graphs and reports to track coverage
- Save time—there's no jumping between programs, it's all integrated with the asset discovery system

#### How we provide value

Rebasoft discovers, assesses and tracks security compliance all from one platform.

- A single deployment collecting and consolidating information means you do not need humans to manually collate and report on data
- Integration into asset management means you do not need to spend hours tracking down systems that need security remediation
- Lightweight—collecting information effectively and automatically reduces the load on managed IT systems
- Fewer systems and automation helps reduce complexity and workload on busy IT teams
- Automation helps eliminate manual tasks and reduces human error

#### But that's just the start

Using the asset discovery system as a base, Rebasoft provides the functionalities of multiple cyber security programs like:

- Asset management
- Secure configuration
- Vulnerability management

So with Rebasoft. you can cover the same ground with less solutions. So, you can save money and reduce complexity, because it's all seamlessly integrated.

#### About us

We at Rebasoft are committed to delivering a robust cyber security solution that addresses genuine business needs. We are not interested in a "silver bullet" approach. We believe that multiple functionalities from one platform and real-time data are essential for keeping up with today's cyber threat landscape. We believe this approach is the future of cyber security and we aim to be the pioneers. We are proudly a UK based company. Visit us at <u>www.rebasoft.net</u>
