

Vulnerability Assessment Defend Everything

Gain a comprehensive overview of what vulnerabilities are on your network devices and which ones you need to address

Traditional vulnerability systems are disconnected from the environments they are supposed to protect. This means there is a lot of manual effort and duplication to stay protected. With Rebasoft you can...

Benefits

- **Implement and automate** a continuous vulnerability management
- **Reduce** false positives and duplicates
- **Automate** and reduce the time to patch critical vulnerabilities
- **Track** compliance with vulnerability targets as set in cyber security standards

Deliverables

Built on top of the Asset Discovery Assessment;

- **Count** of Critical and High vulnerabilities found
 - **List** of CVE, affected element (HW, OS, Application) by device type
- **List** of non-compliant devices
 - Intune manages end point devices: identify AV, encryption compliance. Local domain end point devices: failures of recommended STIG values
- **List** of subdomains and services open to the internet and vulnerabilities discovered
- **Custom report** with recommendations for instant and ongoing improvement

“

“With Rebasoft I can now see all my network attached devices - in one system - and validate them for compliance purposes”

CISO, charity

A vulnerability assessment is the first step to securing your network and achieving compliance

IT teams are struggling to patch vulnerabilities in time - “where do we start? What’s important to us?”

Keeping your software up to date is the single most important security control you can take. But it’s also one of the trickiest.

Organisations fear the downtime from patching, and the possible outages that they can cause. This leads to delayed patching, and shifting it to off-peak hours. But this misses devices which are only online at peak hours and leaves vulnerabilities unpatched, which can lead to your Cyber Essentials certification getting revoked.

Patching is one of the most time consuming tasks that IT teams complain about since it is still such a manual process. Businesses face staff shortages and shouldn’t have to waste time on processes that could be streamlined or automated.

The Vulnerability Assessment utilises Rebasoft agentless asset discovery capabilities to compare your asset inventory to vulnerability data.

- **A single deployment** collecting and consolidating information means you do not need humans to manually collate and report data
- **Integrated into asset management** means you do not need to spend hours tracking down systems that need security remediation
- **Fewer systems and automation** helps reduce complexity and workload on busy IT teams and systems, eliminating manual task and reduces human error
- **No disruptions** - it’s lightweight, so you can see what you want, when you want automatically and no need to install any additional hardware or software
- **Feeds directly into other processes** like secure configuration

So, you’ll finally be able to say with confidence **“this is what’s important to us, let’s go fix it.”**

The screenshot shows a web interface titled 'VULNERABILITIES' with a sub-header 'END POINT CRITICAL VULNERABILITIES'. It includes a search bar, a 'Show 5 entries' dropdown, and a table with columns for 'TOPIC', 'INDIVIDUAL MACS', and 'PERCENTAGE'. The table lists five entries for the topic 'cpe:/a:openbsd:openssh:7.4: (CVE-2001-0554)' with a percentage of 50.0%, and four other entries for various SSH versions with a percentage of 12.5% each. Below the table, it says 'SHOWING 1 TO 5 OF 5 ENTRIES' and has 'Previous' and 'Next' buttons. There is also a small 'VULNERABILITIES' sidebar on the left and a 'FORTNET RELEASES SECURITY UPDATES FOR PORTADC' notification at the bottom right.

TOPIC	INDIVIDUAL MACS	PERCENTAGE
cpe:/a:openbsd:openssh:7.4: (CVE-2001-0554)	4	50.0%
cpe:/a:openbsd:openssh:8.0: (CVE-2001-0554)	1	12.5%
cpe:/a:openbsd:openssh:7.5: (EDB-ID:21018)	1	12.5%
cpe:/a:openbsd:openssh:7.5: (CVE-2001-0554)	1	12.5%
cpe:/a:openbsd:openssh:7.6p1: (CVE-2001-0554)	1	12.5%

But that’s just the start...

Using the Vulnerability Assessment as a base, you’ll be able to identify and address the immediate requirements to secure the network and achieve cyber security standards.

To find out how a **Vulnerability Assessment** can help your organisation today, contact us and to book your consultation.

For the next step talk to us about our **Asset Discovery Assessment** to gain a real-time visibility of what devices are connected to your network so you can stay secure.
